PROJECTS

Plagiarism Detector:

- Developed a user-friendly website that connects users with Plagiarism providers for tasks such as Grammar Checking, Document Uploaded and Report Generating etc.
- Built the platform with HTML, CSS for the frontend and JavaScript, python, php for backend, incorporating features like Plagiarism detector.
- Ensured mobile responsiveness and browser compatibility for enhanced user experience. Implemented real-time notifications and offered accessibility and streamlined service provider discovery through dynamic filtering based on location and ratings.

Noter:

Built a full-stack note-taking application using JavaScript, HTML and CSS. The app allows users to create, update, and delete notes, with data stored securely in Database. Developed a RESTful API using php for back-end operations and integrated the front-end React interface with Redux. Ensured account authentication and authorization for users and note categorization. Deployed the application using hosting platforms (e.g., Heroku, AWS), and focused on scalability and data security.
